

Front-End JavaScript: Make Your Web Pages Come Alive

A hands-on follow-up to HTML & CSS. Over five days you learn JavaScript from zero, take control of the page with the DOM, add forms, timers, storage and live data, and finish by building a complete interactive app.

FORMAT

Instructor-led

DURATION

5 days · 30 hrs

DAILY

3h AM + 3h PM

LEVEL

Beginner

DAILY SCHEDULE

DAY 1 First Scripts & Building Blocks

By end of day: link a script to a page, use the console, and work with variables, data types, operators, and conditionals.

MORNING Module 1 · JavaScript Foundations 9:00–12:00

9:00	L01	Welcome to JavaScript Course orientation, then how JavaScript fits with HTML & CSS
9:30	L02	Linking Scripts & the Console script tags, defer, DevTools console
10:10		Break
10:25	L03	Variables & Data Types let, const, typeof, type conversion
11:15	L04	Operators & Expressions

AFTERNOON Module 2 · Control Flow & Functions (I) 1:00–4:00

1:00	L05	Conditionals if / else, switch, ternary, truthy & falsy
1:45	LAB	Hands-on: console calculator — variables, types & operators
2:30		Break
2:45	LAB	Hands-on: decision-making scripts with conditionals
3:45		Wrap & Q&A

DAY 2 Loops, Functions & First Data

By end of day: repeat work with loops, package logic into reusable functions, reason about scope, and store lists of values in arrays.

MORNING Module 2 · Control Flow & Functions (II)

9:00–12:00

9:00 Recap & warm-up

9:15 **L06** Loops
for, while, for...of, break & continue

10:05 **L07** Functions
parameters, return values, arrow functions

11:00 *Break*

11:15 **L08** Scope & Hoisting
block scope, the scope chain, first look at closures

AFTERNOON Module 3 · Working with Data (I)

1:00–4:00

1:00 **L09** Arrays

1:50 **LAB** **Hands-on:** loops & reusable functions

2:30 *Break*

2:45 **LAB** **Hands-on:** manage a list with array methods

3:45 Wrap & Q&A

DAY 3 Working with Data, Meeting the DOM

By end of day: model data with objects, transform it with array and string methods, then select and change elements on a live page.

MORNING Module 3 · Working with Data (II)

9:00–12:00

9:00 Recap & warm-up

9:10 **L10** Objects
properties, methods, destructuring

10:00 **L11** Array Methods
map, filter, reduce, find, sort

10:55 Break

11:10 **L12** Strings & Template Literals

11:50 Module check-in & Q&A

AFTERNOON Module 4 · The DOM (I)

1:00–4:00

1:00 **L13** Introduction to the DOM
the document tree, nodes, exploring with DevTools

1:45 **L14** Selecting & Modifying Elements

2:35 Break

2:50 **LAB** **Hands-on:** transform a data set, then change a live page with the DOM

3:50 Wrap & Q&A

DAY 4 Events, Elements & Forms

By end of day: respond to user actions, build and remove elements on the fly, validate forms with clear feedback, and schedule work with timers.

MORNING Module 4 · The DOM (II)

9:00–12:00

9:00 Recap & warm-up

9:10 **L15** Events & Event Listeners
the event object, preventDefault, delegation

10:05 *Break*

10:20 **L16** Creating & Removing Elements

11:10 **LAB** **Hands-on:** build a dynamic list — add, remove & delegate

AFTERNOON Module 5 · Building Interactive Pages (I)

1:00–4:00

1:00 **L17** Forms & Validation
submit handling, real-time & constraint validation

1:55 **L18** Timers & Animation
setTimeout, setInterval, the event loop

2:45 *Break*

3:00 **LAB** **Hands-on:** a validated sign-up form and a working timer

3:50 Wrap & Q&A

DAY 5**Storage, APIs & the Capstone**

By end of day: save data with `localStorage`, fetch live data from an API, and combine everything into a complete, working app.

MORNING Module 5 · Building Interactive Pages (II)

9:00–12:00

9:00 Recap & warm-up

9:10 **L19** Local Storage
setItem, getItem, JSON.stringify & parse

9:55 **L20** Working with APIs & Fetch
promises, async/await, error handling

10:55 Break

11:10 **LAB** **Hands-on:** persist a list and fetch live profile data

AFTERNOON Module 6 · Capstone & Next Steps

1:00–4:00

1:00 **L21** Building a Complete Project
Guided build: QuickNote, a note-taking app, step by step

2:30 Break

2:45 **L22** Next Steps & Best Practices
debugging, code organization, your learning path

3:30 **CAP** **Capstone:** choose your final-assessment app & plan the build

3:50 Showcase & wrap-up

COURSE DETAILS

■ Prerequisites

- ◆ **HTML & CSS** — completed *Build & Publish Your First Website* or equivalent
- ◆ Comfortable writing HTML tags, CSS selectors, and page layouts
- ◆ A laptop (Windows, macOS, or Linux) and charger
- ◆ VS Code with the Live Server extension installed
- ◆ A modern web browser with DevTools (Chrome, Edge, or Firefox)

■ What's Provided

- ◆ **Setup check** of DevTools, the console, and a practice folder
- ◆ The full **22-lesson** course workbook (yours to keep)
- ◆ Starter files and reference solutions for every lab
- ◆ Instructor-led labs daily and a guided capstone build
- ◆ A working interactive app of your own by the end of Day 5

What You'll Be Able to Do

Graduates leave able to add real interactivity to a web page unaided.

- ✓ Write clean JavaScript with variables, types & operators
- ✓ Model data with arrays, objects & array methods
- ✓ Respond to clicks, keys & form submissions
- ✓ Save data with localStorage and fetch it from APIs
- ✓ Control flow with conditionals, loops & functions
- ✓ Select, change, create & remove page elements
- ✓ Validate forms with clear, accessible feedback
- ✓ Debug with DevTools and structure a complete app
